

Using our expertise in hardware sourcing, telematics, data processing and communication, IRIS has the know-how to develop niche, white-labelled products for our clients.

Through our telematics development framework we have been able to quickly develop solutions to in diverse sectors such as:

Fleet

IRIS has worked with some of the world's largest Fleet companies to deliver own-label Fleet Management products. Highly flexible, our system co-exists with in-house platforms and front ends to compliment services already in place. We address the needs of the medium sized fleet operators who currently do not utilise telemetry or other major systems in the management and operation of their fleet.

This proposition is based on our ability to provide to hardware that is capable of collecting telematics data and transmitting it in real time, wirelessly, to the IRIS Comms Hub. Comms Hub processes the data and transmits via API to the client's portal which in turn presents the data to their users.

Insurance

Working both with intermediaries and directly with some of the biggest names in insurance, IRIS has a long history in developing solutions that address the needs of the insurance sector.

Insurers have historically turned to both integrated in-car and post-purchase telematics technology systems to support information gathering, transmission of location data, and value-added service provision. It is no secret, however, that most insurers have struggled to make telematics an integral part of their core business strategy.

Our experience means we can combine software, platform and hardware to deliver whatever is needed. Whether the job requires basic tracking devices to monitor driver behaviour, or more sophisticated gyro enabled technology to provide a unique level of data for accident reporting, IRIS is ideally placed to deliver the right solution for your needs.

Mobile workforce tracking & safety

Workforce tracking uses Mobile Phone tracking technology and is simple, easy to use and can be set up in minutes. Unlike vehicle tracking, mobile tracking also means you can continue to track even when the employee has left their car or van. It is a non-intrusive way of checking on their location at any time.

Highly functional with multiple alerts and communications options, our Mobile workforce tracking and safety solution will:

- Increase productivity of field based staff
- Increase revenue performance
- Provide comfort and security to lone workers

Leisure vehicles

Hal-Locate is a leading caravan and motorhome tracker and has achieved the highest standards for Thatcham CAT 6 accreditation. It was designed by us from scratch to address this market and features:

- Ultralow power consumption maximising leisure battery life
- Advanced antenna technology and supersensitive GPS receiver
- Advanced twin geo-fence protection zones
- Integral rechargeable backup battery
- Secure operating centre
- Very compact, easy to install, hard to detect
- Control via mobile phone
- Auto arm after 2 hours

HAL-Locate is covert and cannot easily be disarmed by thieves. If a vehicle is stolen, HAL-Locate remains active, continuously reporting vehicle location, speed and heading. For more information visit www.hal-locate.eu
