

Mobile Workforce Management has progressed rapidly following developments in personal and asset location devices in recent years. Understanding what your employees are up to, where and when can deliver significant benefits – and legislation requirements, communication issues and productivity targets means that it is sometimes critical for companies to understand what their employees are doing during paid hours.

We are well placed to provide hardware for personal and asset tracking; however there may be occasions when you need to avoid the investment needed for hardware and the disruption associated with installation. Using a combination of our Comms Hub and Mobile Apps, we can deliver location and tracking functionality using the smart phones already in the hands of your staff.

The benefits of mobile workforce tracking include:

- Reduced administration costs from automation of electronic timesheets.
- Added security for lone workers through location and SOS function
- Monitoring working time and identification of under-performing or under-utilised staff.
- Providing evidence for dispute resolution e.g. proof of delivery.
- Improved quotation accuracy from better understanding of cost of sale and service delivery.
- Increased visibility of worker activities and locations.

Mobile Apps

Regardless of the mobile network used; location, speed, time and other information can be instantly communicated to multiple stakeholders within your organisation. In addition to this, combining the App with our Comms Hub means you can set up multiple event/alert scenarios so that the relevant people receive the right information in an instant.

- ↪ Using a combination of our Mobile Application development expertise and Comms Hub, we can provide rapid, low-cost tracking solutions that:
- ↪ Requires little up-front investment
- ↪ Has no need for physical installation
- ↪ Adheres to an industry standard open architecture
- ↪ Rapid deployment, up and running in a matter of hours

Comms Hub

Comms Hub is our proprietary software platform and has web-hooks at its heart. Web hooks means a single event trigger could result in multiple communications actions, all in an instant and defined by you.

- ↪ Get highly functional telematics outputs from fragmented hardware deployments with differing technical capabilities
- ↪ Hardware agnostic, meaning you to get consistent, highly adaptable outputs
- ↪ Adheres to an industry standard open architecture
- ↪ Easy integration of Fleet, Asset and Mobile Workforce tracking into other systems
